

**Black plastic collapsible side-wall totes for pre-baled recyclable sorting and storage**

Photo on the left shows Cu wire storage and (covered) totes of tin cans prior to baling. With the use of lids, plastic totes easily stack.

Quantity of totes can indicate when enough material is available to make a bale. For instance 3 to 4 totes of scarp metal equals one 1400 pound bale and 4 to 5 totes of tin cans equals one 800 pound bale.

**Medium sized plastic totes for food waste collection and other recyclable collection.**

Plastic totes are light, easy to clean and easily labels. To be used to store a variety of materials.

### Blue collection containers for recycling

Containers are provided without charge to the public to promote recycling at public events. Containers are easily labeled to provide specific use such as “Plastic bottles”, “Food waste” etc.

Signage to promote public education and proper sorting in recyclable collection area

Drum grab attachment for Bobcat forks  
Allows for the safe and efficient handling of 30 and 55 gallon drums.
